

**EUROSOLAR /UIA-ARES MANIFESTO**  
**Rome, 19-20 May 2011**

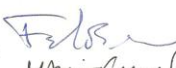

**THE ARCHITECTURE OF WELL TEMPERED ENVIRONMENT**  
**A HARMONY OF INTEGRATED INSTRUMENTS**

SHORT SUMMARY

We strongly believe that Architecture and Urban Planning have a leading role for the formal and functional quality of our future, social and natural environment, and to ensure survivable levels of comfort and well-being, it is unavoidable and urgently necessary that the design is the result of a harmony of well tempered environment.

It will be necessary to reformulate the *approach* by which we act on built environment and nature, and as professionals, planners, architects and engineers, assume the **responsibility of our role**.

**Ten key actions** in the fields of: ENERGY – ENVIRONMENT – ARCHITECTURE – CITY – EDUCATION – THE PROFESSIONS – GOVERNANCE 1) *Architectural solutions should guarantee buildings free of non-renewable energy and powered by renewable energies;* 2) *Design buildings, neighbourhoods and cities with distributed renewable energy, network and storage systems.* 3) *Encourage pedestrian and bicycle mobility, reducing pollution and private car use.* 4) *Reformulate the rules and approaches, increasingly complex, of the Architectural and Urban Design* 5) *Restore the links between aesthetics, technology and function in the Architectural and Urban* 6) *Design with multidisciplinary skills and integrated design.* 7) *Pursue the integration of natural and human ecosystems.* 8) *Ensure energy efficiency through innovations and technologies.* 9) *Promote scientific, technological experimentation and new technical culture involving universities, professionals, governments and industries.* 10) *Seek the political commitment through appropriate instruments and policies.*
