

Letter to the UIA
11 October 2019

CALL FOR PROPOSALS: DEADLINE EXTENDED!
'An Architecture Guide to the UN 17 Sustainable Development Goals'

The **UIA Commission on the UN Sustainable Development Goals**, the **Royal Danish Academy of Fine Arts Institute of Architecture and Technology** and **UIA 2023 Copenhagen** are in partnership working on a second edition of "**An Architecture Guide to the UN 17 Sustainable Development Goals**". We are currently accepting proposals for case material for the second edition from architects, landscape architects and urban planners!

Intended to help architects and architecture students all over the world to understand how they can contribute to the goals and to help politicians and other stakeholders understand the role of architecture in fulfilling the Sustainable Development Goals, the first edition of the book was published in December 2018 and a second, expanded edition with a more comprehensive international selection of cases is planned for 2020.

Each chapter of the Guide presents one Sustainable Development Goal, as defined by the UN, outlining how it interacts with the built environment and giving examples of realized architectural projects. See here [an example](#) from the first edition of the 2018 edition of the Guide.

Case proposals of architecture projects to be included in 'An Architecture Guide to the UN 17 Sustainable Development Goals'. Cases should be realized architecture, landscape architecture and urban planning projects, which illustrate the different ways in which

architecture can contribute to the realization of one or several of the 17 UN Goals for Sustainable Development.

SELECTION CRITERIA FOR CASES

The Editorial Committee will select cases based on architectural quality, impact on the goal, and geographical distribution. We are seeking wide international representation and a comprehensive understanding of the architectural potential of each Goal. The Editors will select 3-5 cases for each goal which illustrate in different ways how architecture can contribute to the realization of the goal. The 17 Goals are interconnected and while any sustainable architectural project will interact with more than one goal, each project should focus on its contribution to a single goal. Only realized architectural projects will be considered.

SUBMISSION GUIDELINES

- A written reference presenting the project / Language: English / Format: Word or PDF
- A selection of photographs of the project in print quality (We also welcome diagrams or drawings) and the copyright information (name of photographer etc.) / Format: Jpg/jpeg/pdf
- Information about the full team: Company names of the stakeholders engaged in the completion of the project (architects, client, engineers etc.)

Selected case material will be used in the Guide, which will be printed and featured online. In addition, the case material will be shown on the [UIA 2023 homepage](#).

Proposals that do not meet the aforementioned criteria will not be considered.

Please do not spend time making a layout for the material you submit. (Graphic designer Lene Rose will arrange the layout of the book.)

Send your project proposal to: [Sofie Stilling](#) and [Thomas Bøjstrup](#)

SUBMISSION DEADLINE

31 October 2019

We hope you will consider contributing your work, or sending us a reference to a project you think belongs in the Guide. We look forward to hearing from you!

Chief Editor **Natalie Mossin**

Architectural Editor **Sofie Stilling**

Architectural Editor **Thomas Bøjstrup**

Managing Editor **Annette Blegvad**
